

# Polyroof Roofing Systems with Photovoltaic Cells

Polyroof's range of BBA-approved roofing systems are ideal for use with photovoltaic cells and, being applied as a liquid, they can seamlessly encapsulate the supports of PV cells to provide a completely watertight detail. The waterproofing membranes are tough and durable and can easily support the weight of PV cells whilst also being resistant to damage from other trades. Polyroof roofing systems are equally suitable for new build or refurbishment projects and carry guarantees of up to 20 years.

Polyroof Products Ltd operates under the ISO 9001 Quality Management scheme and the ISO 14001 Environmental Management System. We aim to achieve sustainable roofing solutions through extended lifecycle costing and the use of raw materials from renewable sources.
